SUMMARY

Backend-focused engineer building production AI infrastructure. Four @ykstorsorg npm packages (one with build provenance) and a public GitHub Marketplace Action. Patterns from a solo production AI deployment, extracted into seven open-source repos: RAG, LLM safety, eval, benchmarking, Kubernetes/GitOps, webhook reliability.

TECHNICAL SKILLS

Languages

TypeScript · JavaScript
Python · SQL
Rust (learning)

Backend / Data

Node.js · Express · Next.js
PostgreSQL · pgvector
Prisma 7 · Redis · BullMQ

Infra / AI

Docker · Kubernetes · Helm
Terraform · GitHub Actions · Vercel
OpenAI · Anthropic · Ollama

OPEN-SOURCE PROJECTS

Anvil [Creator](#) · [github.com/ykstorm/anvil](#)

- Idempotent webhook → BullMQ worker pipeline: HMAC-SHA256 constant-time verify, dedupe by sha256(signature + payload), retry backoff [1s, 5s, 30s, 5m], dead-letter replay via a separate consumer.
- Five design contracts proven by tests in CI (Redis-backed). Ships a Terraform module + Helm chart. Published as \u{40}ykstorsorg/anvil v0.1.0 on npm with build provenance.

TypeScript BullMQ Redis Express Terraform Helm

Goldset [Creator](#) · [Maintainer](#) · [github.com/ykstorm/goldset](#)

- Three eval runners — golden dataset, LLM-as-judge, and structural assertions — packaged as a public GitHub Action with a pluggable judge (OpenAI / Anthropic).
- Runs the suite on every PR, posts a delta-vs-base comment, and blocks the merge on regression. Published as \u{40}ykstorsorg/goldset v0.2.0 on npm + GitHub Marketplace.

TypeScript esbuild OpenAI Anthropic GitHub Actions

Anchor [Creator](#) · [anchor-iota-ten.vercel.app/playground](#)

- Provenance-first RAG with cosine-floor refusal. API returns { chunks, sources, refused } — chunks above the floor, refused below, with a deduped sources array per response.
- Postgres + pgvector via docker compose up; one-command quickstart from a clean clone. Live playground renders the retrieval decision for any query.

Postgres + pgvector Prisma 7 Next.js 15 OpenAI embeddings

Tripwire [Creator](#) · [github.com/ykstorm/tripwire](#)

- Mid-stream LLM safety. Token-by-token rule engine aborts the response stream on rule trip, before the bad token reaches the user.
- Sub-millisecond decision per chunk; zero buffering on happy path. Ships an OpenAI-compatible sidecar proxy (POST /v1/chat/completions) that streams through the guard and aborts mid-stream on a rule trip. Published as \u{40}ykstorsorg/tripwire on npm.

TypeScript Node async iterators streaming abort

Quickdraw [Creator](#) · [github.com/ykstorm/quickdraw](#)

- LLM streaming benchmark CLI. TTFT, tokens/sec, p50/p95/p99, and cost per 1K across OpenAI + Anthropic. quickdraw diff flags regressions between runs. Published as \u{40}ykstorsorg/quickdraw v1.0.2 on npm with SLSA build provenance.

TypeScript OpenAI Anthropic CLI

Stackup [Creator](#) · [github.com/ykstorm/stackup](#)

- Kubernetes GitOps lab on a kind cluster: ArgoCD app-of-apps, Argo Rollouts canary, and kube-prometheus-stack. Helm charts + manifests validated in CI.

Kubernetes ArgoCD Helm kind Grafana

Codecraft [Creator](#) · [codecraft-ai-tau.vercel.app](#)

- Boots a real Vite + React dev server inside the browser tab via WebContainers — no backend, no install. Editable Monaco wired to the WebContainer FS (debounced writes, sub-2s HMR); an interactive xterm runs real shell commands; an IndexedDB snapshot cache drops repeat-visit boot under 20s. The COOP/COEP cross-origin-isolation boundary is what makes SharedArrayBuffer and the in-tab runtime work.

WebContainers Monaco xterm Vite COOP/COEP

EXPERIENCE

Homestey.ai LLP [Co-Founder & Sole Engineer](#) · Remote · Nov 2025 – Present

- Sole engineer on a live buyer-side real-estate AI: Next.js 15, Postgres + pgvector, Prisma, GPT-4o and Claude streaming, behind rate limiting, intent routing, and Sentry.
- Built the chat path around refusal-first retrieval and a mid-stream guardrail — the AI declines when it has no grounded source rather than improvising, which in real estate is a liability, not a UX choice. Both patterns were hardened into standalone OSS (Anchor, Tripwire).

Next.js 15 Postgres + pgvector Prisma 7 GPT-4o Claude Sentry Docker
